I can confirm I received your letter re the Consultation-Unlawful Instruments of Gaming I have read this and visited the website to view the Consultation Papers.

I have been in the Coin Operated Amusement Industry for 22 Years at present this industry mainly survives on operation of Prize Vending Machines eg Claw Games, Merchandise Machines in my own company 70-80% of our revenue comes from such games if there was a Legislation to ban such machines not only my Company but most Companies of such games in South Australia would be forced to close there business.

I believe Claw Machines are a Game of Skill Only and do not influence Minors to become Gamblers this machine has been enjoyed by families and people of all ages for decades, this machine is definitely not a game of chance as every player who plays the machine has a equal opportunity to win a prize.

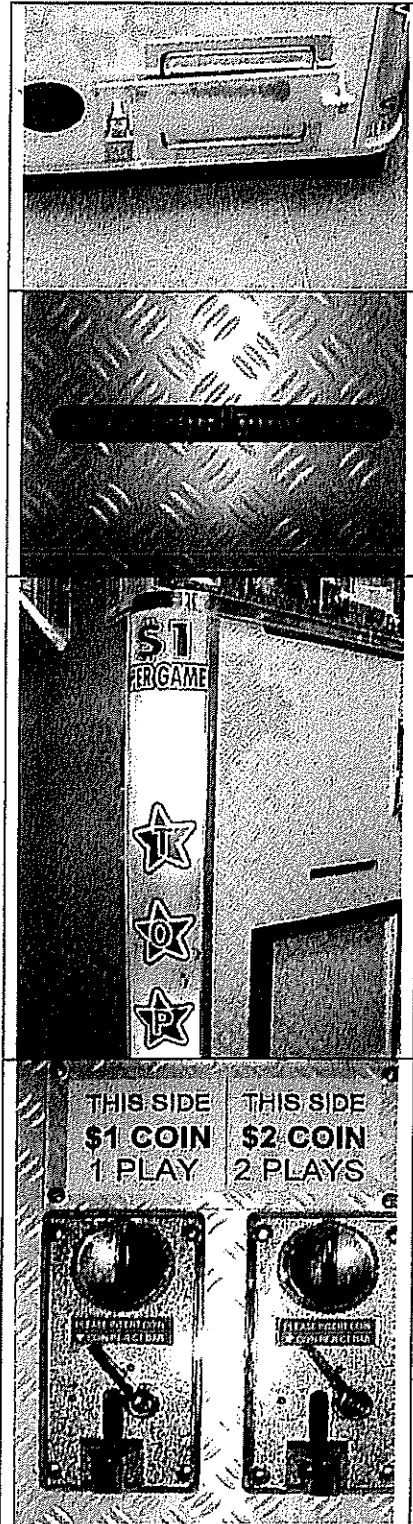

I saw with Interest some of the machines on your Consultation papers that were used to describe certain categories of Machines one in particular is a machine that was designed by my Company for the purpose of being a 100% Game of Skill we did this so if there was ever a argument of this particular machine being a Gambling Machine we can prove that it is 100% Skill Game it was designed purely to have difficulty settings based on Speed so players used there hand and eye co-ordination to play the game each player has a fair and equal opportunity to win a Prize.

I have attached a picture for your reference of this machine

I look forward to hearing from you
